

Muhammad Umar Ehtisham Mian

Agentic AI Engineer

+92-303-8409222 | umareht@gmail.com | linkedin.com/in/umarehtisham | github.com/umarehtisham |
Lahore, Pakistan

PROFESSIONAL SUMMARY

Agentic AI Engineer with a strong foundation in Generative AI, ICT, and business development — focused on evolving into an Agentic AI Architect. Actively building AI-native solutions through AI-driven development practices, covering everything from multi-agent orchestration and workflow automation to LLM-powered backends that deliver real business impact. The combination of technical depth and commercial understanding ensures every solution is built to deliver real business value.

TECHNICAL SKILLS

AI Frameworks & Orchestration: LangChain, LangGraph, LlamaIndex, OpenAI Agents SDK, AgentKit, n8n Queue Mode

LLM & Agentic Systems: Multi-agent systems, RAG pipelines, tool calling, memory management, context engineering

Vector Databases: Pinecone, Weaviate, Qdrant, Supabase

AI Coding Agents & Gateways: Claude Code, Gemini CLI, Qwen Code, OpenClaw

Programming & APIs: Python, FastAPI, REST APIs, MCP Server, PostgreSQL

Data & Visualization: Pandas, Matplotlib, Seaborn, Plotly, Power BI

Cloud & Infrastructure: AWS (EC2, VPC), Docker, Hostinger VPS

PROFESSIONAL EXPERIENCE

Agentic AI Engineer

Bigello | Dec 2025 – Present

- Adopted an architect-first approach — analyzing business problems, mapping current workflows, and identifying automation opportunities before selecting any technical solution.
- Learned to evaluate when agents are truly needed versus simpler automation — selecting the right approach, no-code, low-code, or pro-code, based on what delivers value fastest.
- Selected orchestration patterns — sequential, parallel, or event-driven — based on the nature of each problem, treating design decisions as seriously as implementation.
- Developed autonomous AI agent systems that execute multi-step tasks, integrate external tools, and make decisions based on context.
- Built multi-agent workflows with stateful memory, branching logic, tool calling, and human-in-the-loop controls.
- Connected agent systems to external tools and data sources via MCP for standardized tool integration.
- Applied context engineering to structure LLM inputs — improving reasoning quality and output consistency.
- Added guardrails to validate agent inputs and outputs — ensuring reliable, predictable behavior in production.
- Designed automation workflows connecting AI to REST APIs, databases, WhatsApp, Telegram, and Slack.
- Built and deployed backend APIs and containerized agent systems on cloud infrastructure.
- Configured AI gateways to manage model routing, provider switching, and cost optimization across multiple LLM providers.

Generative AI Engineer

Vebotics International | Aug 2024 – Jan 2026

- Built LLM-powered systems using embeddings and RAG techniques to deliver context-aware, accurate responses across client use cases.

- Built custom RAG pipelines with hybrid retrieval — combining dense vector search with BM25 sparse retrieval to improve response accuracy.
- Set up and managed vector knowledge bases using Pinecone, Weaviate, Qdrant, and Supabase for semantic search and document retrieval.
- Experimented with and refined prompting techniques — including chain-of-thought, few-shot, and structured outputs — to consistently improve LLM performance.
- Built n8n-based automation workflows integrating AI with REST APIs, databases, and third-party services.
- Extended LLM capabilities by developing custom tool functions and execution handlers for domain-specific tasks.
- Built backend APIs using FastAPI and managed relational data using PostgreSQL to support AI models and application backends.

Data Analyst

Vebotics International | Jan 2023 – Jul 2024

- Worked with clients to understand their business challenges and supported the development of data-driven solutions aligned with their goals.
- Analyzed and transformed raw data into actionable insights to support business decision-making.
- Built dashboards and visualizations using Matplotlib, Seaborn, Plotly, and Power BI for both technical and non-technical stakeholders.
- Cleaned, organized, and prepared data from multiple sources using data wrangling and web scraping techniques.
- Applied basic statistical methods to identify trends and support process improvement initiatives.

Head of Business Development

Vebotics International | Aug 2017 – Dec 2022

Led end-to-end business development as both BD lead and Pre-Sales Engineer across public and private sector clients; designed tailored ICT solutions, managed project lifecycles, and consistently secured 25–30% margins per deal.

Account Manager – Enterprise Business

Multinet Pakistan (Pvt.) Ltd | Nov 2016 – Jul 2017

Managed enterprise ICT accounts (Business Connectivity, Cloud, Data Center, Managed Services); drove OPEX and Pay-as-You-Go deals, handled upselling, RFPs, and client conflict resolution via Oracle Fusion CRM.

Key Account Manager

PTCL/Etisalat | Feb 2015 – Nov 2016

Drove B2B sales of ICT and managed services to corporate clients; managed CAPEX and OPEX deals, RFPs, tenders, and key account relationships across public and private sectors.

EDUCATION

MBA, Marketing — University of Management and Technology (UMT)

BCS (Hons), Computer Science — The University of Lahore

CERTIFICATIONS

- AI Agents Fundamentals – Hugging Face
- Power BI – 365 Data Science
- Data Visualization with Python – Duke University | Coursera
- Data Cleaning and Preprocessing with Pandas – 365 Data Science
- Artificial Intelligence Fundamentals – Xeven Solutions
